Invitation email

Subject: Compliance/traceability changes in the honey bee and cherry industries

Dear Cherry Orchard Owners or Managers,

The Department of Agriculture, Fisheries and Forestry (DAFF) has provided funding to the University of Tasmania to conduct a national survey on the regulatory compliance and traceability practices within the honey bee and cherry industries, including how digital technologies may assist operations.

Due to your knowledge and experience in either the honey bee or cherry industry, you are invited to complete a 15-minute online survey. Your insights will provide accurate and realistic contributions that will influence the Government's future direction in improving compliance/traceability practices.

The survey, which is available via computer and mobile devices, is anonymous, does not require any confidential information, and it will not be possible to identify you or your business in the outcomes. Participation is entirely voluntary.

In return for your participation, a summary of the results of the national study can be requested that will enable you to benchmark your practices against others in your industry.

Further details about the survey and the summary of results are provided in the attached Participant Information Sheet. If you are interested in participating in the survey, please click on the below link or scan the QR code, where you will be requested to provide your consent before accessing the questions.
